

COVID-19 Vaccine FAQs (2 pages)

Information in this document is current as of 8.18.2021. It will be updated as new information becomes available.

Who is eligible to get a COVID-19 vaccine?

Anyone who meets the age guidelines for an initial series of COVID vaccine is eligible. Moderna and Janssen/J&J vaccine has been approved for anyone age 18 and older. Moderna vaccine requires two doses, 28 days apart. The Janssen (J&J) vaccine requires one dose. Pfizer vaccine is approved for age 12 and older; it requires two doses, 21 days apart.

Effective August 16, the [CDC recommended a booster dose of mRNA vaccine](#) (Pfizer or Moderna) for moderately to severely immunocompromised people (such as cancer treatment, organ transplant, stem cell transplant, certain immunodeficiency syndromes, advanced or untreated HIV infection, and/or treatment with drugs that suppress the immune response). The booster dose should be administered at least 28 days after the second dose.

Beginning this fall, the CDC expects to recommend a booster dose for all who received either Pfizer or Moderna vaccine, eight months following the second dose.

The booster dose should be the same brand as the first series (Pfizer or Moderna). Current CDC recommendations do not apply to Janssen (Johnson & Johnson) vaccine. You can get personal vaccination records through the Washington State Immunization Information System (WAIS) at wa.myir.net.

Please schedule an appointment with your healthcare provider if you would like to discuss whether a booster dose is appropriate for you.

Where can I get COVID vaccine?

Local healthcare organizations, pharmacies and health departments offer COVID vaccine, often without an appointment. Check the Department of Health [COVID Vaccine Locator](#) (1-800-525-0127) for more information. COVID vaccine is not offered at Family Care Network clinics.

How much does COVID-19 vaccine cost?

COVID-19 vaccine is available at no cost to individuals. Clinicians giving the vaccine may charge an administration fee, which is billed to public or private insurance and reimbursed according to the terms of the plan. Uninsured patients may have the administration fee covered by the HRSA COVID-19 Provider Relief Fund, or private pay policies may apply.

Are COVID-19 vaccines safe?

We take our role in evaluating vaccine safety for our patients very seriously. Our physician leadership team has reviewed the clinical trial data and independent evaluations that are available on COVID-19 vaccines and are confident in their safety and efficacy. Like all vaccines, some people may be advised against getting the COVID-19 vaccine based on their personal health history. This does not mean that the vaccine is not safe. Visit the websites listed at the end of this document for more information.

What are the side effects?

The most common side effects of COVID-19 vaccine are sore arm, tiredness, headache, fever or chills and muscle pain. Most side effects occur within two days of getting the vaccine and last about a day.

To help track side effects, the CDC offers **v-safe**, a smartphone-based tool that uses text messaging and web surveys to provide personalized health check-ins after you receive a COVID-19 vaccination. Participation in v-safe is optional. To register, go to vsafe.cdc.gov.

IMPORTANT: BE AWARE OF SCAMS, KEEP YOUR PERSONAL INFO SAFE

Vaccine will only be made available through legitimate sources such as government health departments, health care facilities, pharmacies, etc. The Better Business Bureau advises against posting photos of your CDC Vaccination Record card online. Information on the card could be used for identity theft or to make counterfeit cards.
